FLEX HOUSE

by Shelter Dynamics

Please join Green Builder Media, Amazon Alexa, JinkoSolar, Bosch and LEDVANCE for an exclusive media event at The Flex House, a smart, right-sized home demonstrating real-world applications for high-flying technology.

The Flex House is designed to help homeowners use exactly the amount of resources they need to live affordably and abundantly without unduly taxing the resources of our beautiful planet.

Let us take you on a private tour of The Flex House, where you'll experience a diverse ecosystem of advanced Smart Home 2.0 technologies, including voice-enabled lights, speakers, switches, plugs, locks, and appliances, as well as advanced thermotechnology, solar panels with battery storage, "sun-scaping" (sun-powered landscaping tools), connected irrigation and weather tracking systems, digital sleep aids, healthcare monitors, food allergy sensors, and virtual reality home schooling.
